

The Caresfield Roadmap to Supply Chain Resilience

You no longer have to wait for months on end while a would-be supplier spends time searching the internet, emailing you back-and-forth, or calling with questions about the products you need, only to provide an incomplete cross-reference document. At Caresfield, we have developed a streamlined conversion process specifically for non-latex phlebotomy tourniquets, removing the administrative burden while delivering accurate, actionable information in the quickest time possible. Whether you are transitioning your entire facility to non-latex or simply securing a more reliable supply line, our seven-day evaluation process ensures your lab maintains clinical excellence without the typical conversion delays.

Strategic Identification: US-made laboratory-grade labels

While global supply chains face uncertainty, Caresfield provides a safe harbor for your most critical lab consumable: identification. Our laboratory-grade labels are manufactured directly at our Minnesota headquarters, ensuring that your automation lines never stop due to international port delays or tariff-related stockouts.

- **Harsh-Environment Engineering:** Designed to withstand environmental extremes, including cryogenic storage, chemical exposure, and high-speed centrifugation.
- **Guaranteed Scannability:** Engineered for high-resolution barcode integrity, ensuring 100% first-time read rates to eliminate manual workarounds and system downtime.
- **Direct-from-Manufacturer Reliability:** By sourcing directly from our North American facility, you gain transparent lead times and a partner who understands the clinical urgency of every test.

How Does the Caresfield Process Work?

caresfield®

DAY 1: List of Items Used

Your Caresfield Territory Manager will contact you to compile a cross-reference list of all current items you use in the category.

DAY 2: Cross Reference

We will thoroughly cross-reference your items with the equivalent Caresfield items.

DAY 3: Proposal

We will provide a comprehensive cross-reference and proposal for the products that constitute 100% of your spend.

DAY 7: Evaluation

You will receive samples for your clinical staff to test. Caresfield has a simple evaluation form to guide you through the evaluation process.

DAY 25: Set-Up

Our dedicated Customer Service Team will activate your account so you can begin placing orders right away. All stock products will be shipped same day when received before 2PM CST.

DAY 28 & On: Support

At your request, our product specialists will come to your facility to provide training on tourniquet use. Caresfield is always available by phone, email, or for on-site support any time you need us!
